*Philosophical Issues in Sport Science Emily Ryall 2020-02-18 The role and value of science within sport increases with ever greater professionalization and commercialization. Scientific and technological innovations are devised to increase performance, ensure greater accuracy of measurement and officiating, reduce risks of harm, enhance spectatorship, and raise revenues. However, such innovations inevitably come up against epistemological and metaphysical problems related to the nature of sport and physical competition. This Special Issue identifies and explores key and contemporary philosophical issues in relation to the science of sport and exercise. It is divided into three sections: 1. Scientific evidence, causation, and sport; 2. Science technology and sport officiating; and 3. Scientific influences on the construction of sport. It brings together scholars working on philosophical problems in sport to examine issues related to the values and assumptions behind sport and exercise science and key problems resulting from these and to provide recommendations for improving its practice.*

*Quantile Regression Roger Koenker 2005-05-05 Quantile regression is gradually emerging as a unified statistical methodology for estimating models of conditional quantile functions. By complementing the exclusive focus of classical least squares regression on the conditional mean, quantile regression offers a systematic strategy for examining how covariates influence the location, scale and shape of the entire response distribution. This monograph is the first comprehensive treatment of the subject, encompassing models that are linear and nonlinear, parametric and nonparametric. The author has devoted more than 25 years of research to this topic. The methods in the analysis are illustrated with a variety of*

applications from economics, biology, ecology and finance. The treatment will find its core audiences in econometrics, statistics, and applied mathematics in addition to the disciplines cited above.

*The Transgender Exigency Edward Schiappa 2021-12-17 At no other point in human history have the definitions of "woman" and "man," "male" and "female," "masculine" and "feminine," been more contentious than now. This book advances a pragmatic approach to the act of defining that acknowledges the important ethical dimensions of our definitional practices. Increased transgender rights and visibility has been met with increased opposition, controversy, and even violence. Who should have the power to define the meanings of sex and gender? What values and interests are advanced by competing definitions? Should an all-boys' college or high school allow transgender boys to apply? Should transgender women be allowed to use the women's bathroom? How has growing recognition of intersex conditions challenged our definitions of sex/gender? In this timely intervention, Edward Schiappa examines the key sites of debate including schools, bathrooms, the military, sports, prisons, and feminism, drawing attention to the political, practical, and ethical dimensions of the act of defining itself. This is an important text for students and scholars in gender studies, philosophy, communication, and sociology.*

*The Transformational Coach Greg Winkler 2020-10-05 "If you truly want to make a difference in the lives of others, this is a must-read. Greg Winkler's message to help us combat our youth sport participation crisis and our parent crisis is spot on." -Geoff VanDeusen, Director of Operations & Events, United Soccer Coaches "Greg Winkler's book is a great roadmap for coaches striving to be influential. His Transformational Coaching method will shift your entire paradigm regarding coaching. It will drive you to become a more mindful coach, thereby creating stronger players, teams, and families." -Teresa Palmer, Kagen School Trainer, Girls on the Run Coach, and Life Skills teacher at FSW Collegiate High School American youth athletes are abandoning athletics at an alarming rate, with 70% of children dropping out of youth sport programs by the age of 14. One of the top reasons for this dropout rate is poor coaching, yet, only 30% of youth and high school coaches have any formal training. The Transformational Coach gives coaches the tools to build relationships, move their teams forward, and improve the development of their players as they progress to the next level. This book teaches them how to guide with a purpose. With better coaching, the youth participation crisis in the United States can be addressed, and the negative parent perception can be fixed. This book will develop strong coaches who will lead the way. The coaching profession has seen 58% of coaches quit or consider quitting because of parent issues; 82% of coaches report that dealing with parents has gotten worse; 25% of new coaches leave the profession within the first three years. But the transformational coach can use mindfulness strategies to change the alarming trend in youth athletics for the better. The Transformational Coach is about shifting*

*the mindset of coaches—and even players and parents—to build stronger players, a stronger team, and a stronger program!*

*Sports-Related Concussions in Youth National Research Council 2014-02-04* In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

*Special Admission Kirsten Hextrum 2021-08-13* *Special Admission* contradicts the national belief that college sports provide upward mobility opportunities. Kirsten Hextrum documents how white middle-class youth become overrepresented on college teams. Her institutional ethnography of one elite athletic and academic institution includes over 100 hours of interviews with college rowers and track & field athletes. She charts the historic and contemporary relationships between colleges, athletics, and white middle-class communities that ensure white

suburban youth are advantaged in special athletic admissions. Suburban youth start ahead in college admissions because athletic merit—the competencies desired by university recruiters—requires access to vast familial, communal, and economic resources, all of which are concentrated in their neighborhoods. Their advantages increase as youth, parents, and coaches strategically invest in and engineer novel opportunities to maintain their race and class status. Thus, college sports allow white, middle-class athletes to accelerate their racial and economic advantages through admission to elite universities.

Traumatic Brain Injury in Sports Mark Lovell 2020-07-09 Traumatic brain injury (TBI) in sports has become an important international public health issue over the past two decades. However, until recently, return to play decisions following a sports-related traumatic brain injury have been based on anecdotal evidence and have not been based on scientifically validated clinical protocols. Over the past

decade, the field of Neuropsychology has become an increasingly important component of the return to play decision making process following TBI. Neuropsychological assessment instruments are increasingly being adapted for use with athletes throughout the world and the field of sports neuropsychology appears to be a rapidly evolving subspecialty. This book provides a comprehensive overview of the application of neuropsychological assessment instruments in sports, and it is structured to present a global perspective on contemporary research. In addition to a review of current research, *Traumatic Brain Injury in Sports: An International Neuropsychological Perspective*, presents a thorough review of current clinical models that are being implemented internationally within American and Australian rules football, soccer, boxing, ice hockey, rugby and equestrian sports.

*Planning, Development and Management of Sustainable Cities* Tan Yigitcanlar 2019-04-30 The concept of 'sustainable urban development' has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene. Climate change has emerged to be one of the biggest challenges faced by our planet today, threatening both built and natural systems with long-term consequences, which may be irreversible. While there is a vast body of literature on sustainability and sustainable urban development, there is currently limited focus on how to cohesively bring together the vital issues of the planning, development, and management of sustainable cities. Moreover, it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation, but also to the generations beyond. The current global school strikes for climate action (known as Fridays for Future) evidences this. The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide. This book fills a gap in the literature by bringing together issues related to the planning, development, and management of cities and focusing on a triple-bottom-line approach to sustainability.

*Parentology* Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and

happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

*Organized Activities As Contexts of Development* Joseph L. Mahoney 2005-03-23 School-aged children in the U.S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that--along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time,

communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental contexts represented by extracurricular activities, and after-school and community programs. *Organized Activities as Contexts of Development* provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study--psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.

*Social and Sustainability Marketing* Jishnu Bhattacharyya 2021-09-26 "... an important intervention in the conversation around social and ecological sustainability that draws on both micromarketing and macromarketing scholarship to help the reader understand the challenges with illustrations from insightful cases both from emerging and developed economies. This compilation should be essential reading for the discerning student of sustainable consumption and production." -- Professor Pierre McDonagh, Associate Editor, *Journal of Macromarketing* (USA); Professor of Critical Marketing & Society, University of Bath, UK Experts in the field of economics, management science, and particularly in the marketing domain have always been interested in and acknowledged the importance of sustaining profitable businesses while incorporating societal and environmental concerns; however, the level of existing literature and availability of teaching cases reflect a dearth of real case studies, especially those focused on marketing for social good. This book of actual case studies will address that need. In addition, this book is important and timely in providing a case book for instructors (those in both industry and academia) to help them in teaching and training the next generation of leaders through corporate training and universities. Currently, marketing for social good is increasingly becoming a part of most curriculums under the umbrella of different titles, such as social marketing, green marketing, and sustainability marketing. The relevance of these studies is increasing across the globe. This book is composed of long and short real cases with varying complexity in different sectors. This case book will also cover some

review articles for an overview of the recent developments in the study area. With these case studies, collections of questions, teaching materials, and real-life marketing scenarios, this book offers a unique source of knowledge to marketing professionals, students, and educators across the world. The main objective of this case book is to understand the applicability of marketing science (marketing for social good context, such as social marketing and sustainability marketing) in internet marketing related to e-buying behavior and e-WOM. In addition, it illustrates the various types of existing marketing practices that are relevant from both theoretical and practical points of view in this electronic era, as well as discussing other non-electronic marketing practices and focusing on consumer buying behavior. As a result, marketing managers can treat their customers according to their desired value. This book particularly explores the possibilities and advantages created by social marketing and sustainability marketing through the presentation of thorough review articles and case studies. This case book helps corporate training centers and universities with compact teaching reference materials in their relevant courses.

*The Competitive Ethos and Democratic Education* John G. Nicholls 1989 Young children and even infants work hard at mastering various skills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society, exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of

education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children.

*The Economics of Sports* Michael Leeds 2016-05-23 For undergraduate courses in sports economics, this book introduces core economic concepts developed through examples from the sports industry. The sports industry provides a seemingly endless set of examples from every area of microeconomics, giving students the opportunity to study economics in a context that holds their interest. *The Economics of Sports* explores economic concepts and theory of industrial organization, public finance, and labor economics in the context of applications and examples from American and international sports.

*The Man in Black* Gordon Thomson 1998 This work looks at the football referee from every discipline and angle: the history of their genesis as gentlemen arbiters in the Victorian era and their adjustment to the increasing sophistication of the laws; statistical analysis; social profile; cultural comparisons from refereeing around the world and in different sports; the outlook from the bottom (Sunday pub leagues) to the top (FIFA); refereeing philosophies (what is the referee's job?); and personal testimonies. Other influences on the games' decisions - linesmen, corruption, the crowd, TV and technology - are also included, together with many anecdotes, such as worst ever blunders.

*Tube of Plenty* Erik Barnouw 1990-05-31 Based on the classic *History of Broadcasting in the United States*, *Tube of Plenty* represents the fruit of several decades' labor. When Erik Barnouw--premier chronicler of American broadcasting

and a participant in the industry for fifty years--first undertook the project of recording its history, many viewed it as a light-weight literary task concerned mainly with "entertainment" trivia. Indeed, trivia such as that found in quiz programs do appear in the book, but Barnouw views them as part of a complex social tapestry that increasingly defines our era. To understand our century, we must fully comprehend the evolution of television and its newest extraordinary offshoots. With this fact in mind, Barnouw's new edition of *Tube of Plenty* explores the development and impact of the latest dramatic phases of the communications revolution. Since the first publication of this invaluable history of television and how it has shaped, and been shaped by, American culture and society, many significant changes have occurred. Assessing the importance of these developments in a new chapter, Barnouw specifically covers the decline of the three major networks, the expansion of cable and satellite television and film channels such as HBO (Home Box Office), the success of channels catering to special audiences such as ESPN (Entertainment and Sports Programming Network) and MTV (Music Television), and the arrival of VCRs in America's living rooms. He also includes an appendix entitled "questions for a new millennium," which will challenge readers not only to examine the shape of television today, but also to envision its future.
